### **Female Pelvic Floor Anatomy Models – A New Standard in Patient Education**

Atlanta, GA, June 22, 2009 – Healthcare for women before, during and after pregnancy is a growing area of expertise for many medical and therapy professionals. One of the most difficult areas of study is the pelvic floor. In a new series of female pelvic anatomy models, 3B Scientific provides a remarkable resource for doctors, therapists and students to understand and explain this complex area of anatomy from all angles and in increasingly deeper levels of detail.

The [H20/4](#) is life-size, six-part model of a female pelvis showing detailed information about the topography of bones, ligaments, vessels, nerves, pelvic floor muscles and female genital organs. It presents the whole pelvic floor with partially removable mid-sagittally sectioned external anal sphincter, external urethral sphincter, deep and superficial transverse perineal and bulbospongiosus. The rectum, uterus with fallopian tubes, ovaries and vagina are removable and can be disassembled into both halves by midsagittal section.

The [H20/3](#) includes pelvic organs, the pelvic floor and ligaments in 4 removable parts. The [H20/2](#) presents the female pelvis and ligaments in 3 removable parts. The [H20/1](#) presents the female pelvis bony structure in 3 removable parts.

Whether you are instructing an entire group of medical students or are one-on-one with a patient, there is no finer product available for teaching purposes. Each product is covered by a full three-year extended Manufacturers Warranty. These first-class models are shipped from stock by American 3B Scientific, Tucker, GA. For additional information on 3B Scientific anatomy models contact [Stephanie.forbes@a3bs.com](mailto:Stephanie.forbes@a3bs.com) or visit [www.a3bs.com](http://www.a3bs.com).

American 3B Scientific is part of the 3B Scientific group; the world's largest and most experienced manufacturer of anatomical teaching products.
